- BLACK OR VERY BLACK AND WHITE DARK PHOTOS
- GRAY SCALE DOCUMENTS

IMAGES ARE BEST AVAILABLE COPY.

**As rescanning documents *will not* correct images,
please do not report the images to the
Image Problem Mailbox.**

ABSTRACT

A device for transmitting digital optical signals between two units traveling relative
5 to each other comprises a controller located on a transmitter side for controlling
an issued data rate or package size of the digital signals, so that an optimum
transmission is achieved by an adaptation to the transmission characteristics of a
transmission path. An optional evaluation means located on a receiver side
restores original signals so that a conversion remains concealed, but a
10 substantially more reliable transmission is achieved.
